

## DELTA turning up the heat on hot-water systems

Having reliable hot water on tap is a modern necessity. But our hot water is only as good as our hot-water systems and our systems can often be only as good as the quality of water running through our pipes.

DELTA Magnetic Water Conditioners are turning on the tap to more efficient hot water by taking the edge off hard, corrosive and mineral-laced supply. Water-based appliances have become part of everyday life and there are obvious benefits in avoiding clogging and corrosion problems and maintaining efficient systems.

*DELTA Magnetic Water Conditioners can limit the impact of minerals on hot-water elements.*

DELTAwater solutions has the know-how to combat problems involving a build-up of calcium and iron-based scale, salt levels and corrosion. This includes hot-water heating systems and plumbing to those all those important shower recesses, baths, dishwashers and sinks.

The list of happy DELTA clients who have who have seen their circumstances change, some in only a matter of weeks, is growing across Australia and overseas. And the reason is simple – they consider an efficient hot-water system essential.

DELTA hot water - less scale, less corrosion, less costs, less maintenance and greater efficiency.

*“The proof’s in the pudding and I’ve told everyone who comes here to see what we’ve done.”*

*Brett Sendall, maintenance worker, Brodribb Home, aged-care centre, Toowoomba, Qld.*

## Making the most of bore supplies

People living in Nhill and surrounding districts in the far west of Victoria have every right to feel blessed. They have, after all, a guaranteed supply of water, a rarity in a landscape ravaged by drought for more than a decade.

Nhill is in the Wimmera, halfway between Melbourne and Adelaide. It also sits above a vast supply of underground water stretching along the Victorian-South Australian border. This bore field is the source of water that helps maintain everything in Nhill from households and industry to public reserves. But, like most bore water, it has its limitations and a lack of fresh water to ‘shandy’ a mix can often lead to corrosion, scale build-up and plant-growth problems.

Ken and Janet Voigt, who live in Nhill, are confident DELTAwater solutions has provided the answers to water-quality problems in their home and their town. After a visit to the DELTA site at the Wimmera Machinery Field Days near Horsham they installed a DELTA Magnetic Water Conditioner on their house supply. They then noticed a rapid improvement in the quality of their water.

“We don’t get such a prominent ring around the bath like we used to and our garden is turning green again. DELTA was excellent to work with. I put the order in on the Thursday afternoon and by the next Monday morning the item was at our doorstep,” Ken said.

## DELTA- the farm and garden friend

Society's constant demand for fresh fruit and vegetables means that irrigation farmers have to be as efficient as possible in getting their produce to market. That means they can't afford to waste too much time, effort and money making sure their irrigation systems are working properly.

With more farmers tapping into bore supplies to maintain their crops, mineral build-up in drip and spray irrigation lines has become a growing problem. Blocked lines hinder farming efficiency and can lead to sub-standard yields.

*Delta Magnetic Water Conditioners are helping wine growers produce quality plants and quality fruit.*

DELTAwater solutions, with its magnetic water technology, is hitting scale build-up for six, freeing up pipes, drippers and sprays and leaving a growing number of customers more than satisfied with results.

The firm's products have helped everyone from South Australian grape grower Peter Schultz to Queensland hydroponic parsley producers Robin and Joyce Williamson.

The magnetic technology is also freeing up irrigation systems and helping create better home gardens. Dripper and sprinkler systems featuring DELTA products from Nhill in Victoria to Westmar in Queensland are again turning gardens green.

*"The water seems to penetrate the soil better and everything is healthier. We don't have to use as much soap to get the washing clean and we're thinking about growing pumpkins again."*

*Ken Voigt, Nhill*

## Abattoir success

Large organisations need good water and good water-delivery systems to maximise efficiency. Reducing maintenance and improving water quality in boilers, heat exchangers, sterilisers and industrial systems and for wash-downs are key benefits that DELTA Magnetic Water Conditioners are delivering to large organisations such as abattoirs.

A Casino abattoir is saving money on maintenance after installing a DELTA Magnetic Water Conditioner. The abattoir called on DELTAwater to find a solution in combating the build-up of scale in heat exchangers. Every fortnight, staff had to disassemble the exchangers for cleaning which was both costly and time-consuming. Installation of a DELTA Magnetic Water Conditioner has meant the heat exchangers now only require attention every six months.

Water is a serious business

Get serious about making the most and getting the best out of your water with a DELTA magnetic water conditioner

100% Australian designed, made and owned
