PRODUCT**

## a solution in three easy steps

- step 1.** use the water bottle provided and follow our simple instructions to collect your water sample
- step 2.** fill out our questionnaire and include this with your water sample and mail to DELTAwater solutions
- step 3.** we will contact you with your results and solution options within 2-5 days of receiving your sample

## Central West NSW gardener says water test invaluable

Central NSW part-time grazier, David Ward, says getting DELTAwater solutions to test his water first and gain a thorough understanding of his bore water's problems was invaluable to transforming his garden.

The DELTA Water Advisory Service testing of the bore discovered medium Class 2 salinity, extreme hardness and high alkalinity. At these levels they were causing scale in pipes, fittings, drippers, sprays and other irrigation systems. DELTA also tested David's spring/dam water, finding high Class 3 salinity, high chloride and extreme hardness.

He says they also understood the configuration of his pumps, tanks, pipes, dam and bore, and could make product recommendations to suit.

*"Taking the time to look into our water problem carefully before recommending a product has made all the difference. We have two units, and because they understood the configuration of our pipes and pumps they were able to recommend a product for my garden and a different one for my parents' garden. Within a really short time of adopting the system, we've had a really quick result."*
